Safety. Every step
of the way

“Every step is a safe step”

We look at the world of climbing and access differently. Our journey is to find innovative ways of ensuring customers climb smartly, safely and gain access to their areas of work. In this quest, our focus is on knowledge blended to design and quality aligned to service. From the homemaker in the kitchen to the engineer in the aircraft hangar, we ensure the climb comes assured that “every step is a safe step”. That is our commitment and passion.

Home Choice

Home is where Liberti is! Ask us why. Liberti ladders are light, sturdy and safe. Our expertise in extrusion and control over the complete production processes from raw material to the final ladder and onwards to your kitchen and home help us ensure you climb smart and safely. Liberti ladders are easy to move and need no setting up time. You have multiple choices depending on the chore you would want to do at home. From fixing a bulb to trimming the hedges or plucking that flower, we have ladders of different heights and cater to diverse needs. Simple step stools, stepladders and twin ladders, ladders with a utility tray, multipurpose ladders and articulating ladders. All ladders have a clear rating on the load bearing capacities.

Workplace Choice

This is an accomplished area of expertise for us. For close to five decades we have been designing, manufacturing ladders and climbing systems for commercial and industrial use. From the simplest heavy-duty stepladders with utility trays, tool holders to the multipurpose ladders and the more specialized extension ladders, we have them all.

The Liberti commercial and industrial range stand out by virtue of Sagar Asia's commitment to deploy technology that combines resilience with sturdiness. Each of the ladders has added safety features built into them. Standard foot grips and knee rails apart, our ladders meant for commercial use have strength built into the construction and the finer detailing. For example, the rungs and the way they are riveted to the profile.

Ladders for professional use come from heights of 2 feet upwards. In both aluminum and fiberglass. With a variety of uses that make climbing and access safer and smarter. The Liberti heavy duty range is also easy to move, takes practically no setting up time and is designed for smart storage – foldable, tuckable into a corner. Our association with Little Giant also means users get the advantage of state of the art designed ladders adapted for Indian conditions by SA. Load capacity, duty rating and specifications of what the ladder is best suited for are clearly outlined.

Liberti is from Sagar Asia

Global Standards

Nothing but the best for you. Therefore, the Liberti range of ladders. All of them come with international certifications. We call our ladders as being globally certified and in fact 'SA passed'. This means that the ladders meet The US and European standards of quality and compliance. You would be glad to know that Liberti sells ladders across the world under the same brand name. India or abroad, it is the same Liberti with the quality that a world-class ladder manufacturer is expected to deliver. At Sagar Asia, we make ladders that are designed for use in homes to aircraft hangars. So rest assured...

Integration for unsurpassed quality

We are one of the biggest integrated manufacturing facilities with complete control on every aspect of the operation. Our tool room with international credentials ensures we are solution-driven and deliver customized solutions. In the Liberti range from Sagar Asia you can choose from 300 plus ladders available in different heights and load bearing capacities. From the kitchen to the airport hangar we are there.

GLOBALLY CERTIFIED

Climb

Smartly

Liberti means safety,
optimal design and details

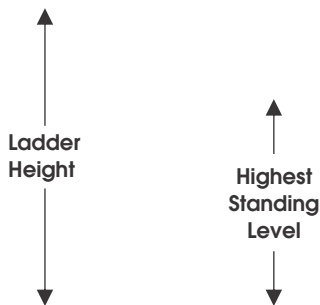

Relevant, optimal design and functionality

Ladders made safe. Every step of the way is the SA promise. The range of over 300 ladders has this as the focus with a fetish for global standards and compliance. The ladders adhere to both ANSHI and OSA standards. The range is signified by its ability to constantly stay ahead of competition by providing new products and innovations. In fact SA up to the 7ft height can actually provide innumerable variations and options. In the type of ladder and material used for making the ladder. Our tool room provides the right perspective in responsive design engineering while our market intelligence and sensitivity to customer needs ensures we are there with relevant, optimal design and functionality.

Liberti Ladders from SA means climbing safely and smartly. Here are some of the unique features: Serrated steps and safety shoes, rivets and braces for extra strength and load capacity, fold down trays and tops as utility fixtures, lightweight design for easy carrying, guardrails and platform for knee protection and extra stability and comfort while working and standing, brackets and locks for secure and smooth operation, premium heavy duty rung locks, spreader arms to facilitate folding and carrying with ease, methodically labeled for clarity in specifications thus aiding choice and lastly a warranty against manufacturing defects.

Choose the right ladder

SELECT HEIGHT

SELECT PERFORMANCE

- Load Capacity
- Duty Rating
- Star & Color Code

SELECT MATERIAL

Aluminium

Light weight, robust and corrosion resistant, Not for use around electricity.

Fiberglass

Non-conductive side rails. For working around electricity.

Safety first

the right way to use a ladder

Lean ladders against the wall
in the right angle

Please note maximum
permissible load as per
duty rating

Restraint straps of step ladders
always have to be tensioned

Single ladders always have to
end 1 m above level of access

It is not allowed to climb/
stand on supports.

On multi-purpose ladders,
rung hooks and rung lock
devices have to be used

Use ground spikes on rough
and slippery ground.

the wrong way to use a ladder

Never erect ladders on
slippery ground

Do not lean to the side
when working on ladder.

Do not stand on the top step of
a double sided step ladder

Do not lean ladders against
unsafe lay-on points

Last rung to stand on:
Step ladders: 2nd rung from top
Single ladders: 4th rung from top

It is not allowed to climb from step
ladders to a higher level of access.

Do not use damaged ladders

Step Ladders

Stepladders are ideal home companions. You need one at home both for indoor and outdoor chores. Like reaching to that suitcase, or putting away the pickle jar in the kitchen. Liberti Stepladders are ideal for simple tasks like changing bulbs, cleaning windows, dusting away unreachable areas and many more routine household chores. SA makes a comprehensive range of lightweight and easy to move aluminum ladders. You have choices from 2 feet height upwards and they come with several unique safety features and global safety standards.

Twin Ladders

Twin ladders means more than just one function and possibly two people at work simultaneously. Our Twin Ladders are designed to support use on both sides. Two people can climb simultaneously, one person per side, on either side of the ladder. For example, if there is a bulb to be changed or a suitcase to be stored in a walk-in closet, then one person can hold the bulb up while the other reaches out to the holder. Or one person can reach to the required height and the other can hand over the suitcase to be stored away. Or if you are painting a wall you can paint your side of the wall while your co-worker does the other side.

Single Ladders

Single ladders need to be propped carefully against a wall for support. Designed for traditional use and also understood to be the old fashioned, yet smart utility. Single ladders have also got to be designed uniquely for safe steps and stability. So when you buy look for rubber bumpers and slip-resistant rubber feet to ensure sturdiness and safety. This type of ladder is often used at homes for various chores and seems to be a favorite library ladder. Liberti's ranges of single ladders are there for household chores and commercial sue. They come in a variety of height options

Extension Ladders

Extension ladders have a base and one or two upper sections that slide up and down to allow you to reach different heights. Liberti Extension range has sturdy and well-designed locks that keep the ladder extended to the desired height. We also have larger extension ladders, which include rope and pulley systems. These allow you to extend the ladder with ease and the setup time is reduced. To provide stability at various angles, the lower section has pivoting feet that adjust the ladder smartly without compromising on safety and stability. Extension ladders require a surface such as a wall or a roofline for support. A good choice for outdoor projects.

Combination Ladders

Multi purpose ladders are multifunctional and multi positional. You can position them in multiple spaces work. Different floor levels. Different uses. Ladder, scaffold base, like a mini extension ladder- the choices and options are many. SA has collaborated with leading players across the world and combined it with their understanding of the users needs. So you may actually discover technical innovations and additions to the known designs. This competency of SA is by virtue of the responsive design and globally recognized tool room.

Articulating Ladders

When you want more than one ladder in one ladder! Articulating Ladders are uniquely designed in two parts or three parts. In some cases they can even become six ladders in one especially when it is a three-part ladder! A trestle step, single ladder, double or triple extension ladder or even a stairway ladder – all of this is possible with our Articulating Ladder range. Versatile? Safe and steady? Yes to all. Our range of Articulating Ladders is designed to be stable, durable and functionally aligned to the job on hand. The ladders can be folded up into a compact shape for easy transportation and storage.
